

HooPay's OsCommerce Integration

Last update: August 21th 2009

How to Integrate HooPay in osCommerce?

Following these steps:

1. Upload the files to the osCommerce server folder.
2. Go to the Admin section of your osCommerce website:
<http://www.domain.com/catalog/admin>
3. Select on the left menu the "Modules" section.
4. Inside the "Modules" section choose the "Payment" section and search for Hoopay.
5. Press on the Hoopay module and click in the Install button on the right.
6. Press "Edit" and fill in the form:
 - 6.1. Enable Hoopay Module: Keep as True.
 - 6.2. Merchants Email Address or Username: Your HooPay's username or any of your HooPay's emails.
 - 6.3. Merchants Signature: Your digital signature key. You can generate this on the following address of HooPay:
<https://www.hoopay.com/members/signature.seam>
 - 6.4. Set Order Status: You can leave it as "Default" if the default variable is "Pending". If the default variable is another please choose "Pending".

Explanation of "Set Order Status":
During the payment some errors can happen. For example:
 - Adding a wrong digital signature key the system will not process the transaction.
 - If the customer presses BACK on the browser while he/she is on the HooPay's gateway, the system will not process the transaction.
 - If any other error happened the system will not process the transaction.*So if some of these errors appear during the payment process, the osCommerce system will keep the transaction as "Pending" or as you have the "Default" variable configured.*
You must go inside HooPay and see if the item cost is paid. If it is not paid, you should delete the order and contact your customer to make it again.
 - 6.5. Set Order Status for succeeded transaction: You can leave as "Processing".

Explanation of "Set Order Status for succeeded transaction":
If the customers haven't got errors during the payment process, the transaction will be as "Processing" because the seller has the money inside his/her HooPay's account.
 - 6.6. Sort order of display: Keep as 0 (zero)
7. Press Update.

Now you should have HooPay's gateway ready to accept payments.

Enjoy HooPay!
