## CECA payment module for osCommerce

Module for osCommerce community of Spanish savings banks, all well explained and tested on a server [Cyberneticos](#) 32-bit Linux.

### 1) Where do we start?

Make sure we have the following information, supplied by the bank to trade, and trade for us programmers:

- Merchant Id
- Terminal Id
- Acquirer Bin
- Clave encriptación TEST
- Clave encriptación REAL
- URL Administración TPV virtual para Comercios Test
- URL Administración TPV virtual para Comercios Real

Ensure that in addition to these data, we have the following attachments:

- Manual TPV\_completo.pdf
- libtpv.a
- calculo.c
- calculo

If we do not have any such data or documents, notify the trade that you have hired or directly with the media following the CECA @: [sopORTE.tpv@ceca.es](mailto:sopORTE.tpv@ceca.es)

### 2) Getting Started

We will upload the files and some of the contribution given by the bank to the following routes to our server:

- catalog/includes/languages/espanol/modules/payment/ceca\_escri2\_module.php
- catalog/includes/languages/english/modules/payment/ceca\_escri2\_module.php
- catalog/includes/modules/payment/ceca\_escri2\_module.php

- catalog/includes/modules/payment/libtpv.a
- catalog/includes/modules/payment/calculo.c
- catalog/includes/modules/payment/calculo
- catalog/includes/modules/payment/ceca.log
- catalog/ceca\_escr2\_return.php

### 3) ¡Settings!

Now we go to the administration of our store, click on Modules>> Payment. Select the module called Credit Card (CECA) and click on Install. Now we edit the data on the same page of the administration in which we, with the data obtained in trade:
