Order Editor Troubleshooting

Version author : @BrockleyJohn john@sewebsites.net

Version 1.2.7 24/12/2019

Admin Orders Edit Button

The addon puts an extra Edit button on the admin view of an order. When this was first changed to a hook there was a particular combination of osc version and addons (which I no longer recall) for deferring this until the page was ready. This approach no longer works from Phoenix 1.0.4.0 so the hook in the main package directly injects the button.

If you are using an earlier version of oscommerce and the extra button is not appearing, first check your browser console for javascript errors. If there aren't any, try using the version of

includes/modules/ hooks/admin/orders_edit_order.php

from the troubleshooting folder.
